

Spring and Hibernate for Beginners

Practice Activity #8

Hibernate Development

Overview

Create an app using Hibernate to read/write data to database table. Here is the database table design:

Table: Employee

Columns

- first_name : varchar
- last_name: varchar
- company : varchar

Steps You Must Complete

1. Create the database table.
2. Set up the Hibernate configuration file.
3. Create a Java class (entity) with Hibernate annotations.
4. Develop a main application.
5. Develop code to save objects.
6. Develop code to retrieve an object by primary key.
7. Develop code to query objects to find employees for a given company.
8. Develop code to delete an object by primary key.

The application should use the same style and approach as shown in the videos.
